QA suggestions:

- The length of the star coordinates array is bounded to be under num_tag, so it should be alloted memory appropriately
- The iterator variable in both loops should be renamed to appropriately prefixed iterator variables, like i_find_centroids.
- All arrays should have an **arr_** prefix
- The loop to remove the zero rows should start from the first row and end at the (num_stars+num_zero_rows)th row of star_coordinates

Implementation:

```
arr_star_coordinates = zeros(num_tags, 2); %(k, 1)=pos_x
(k,2)=pos_y

for i_first_loop=1:num_tag
...
end

arr_tot_sum_x = zeros(num_final_tags,1);
arr_tot_sum_y = zeros(num_final_tags,1);
arr_tot_weights = zeros(num_final_tags,1);
arr_tot_pixels = zeros(num_final_tags,1);
```
